active ingredient(s) (e.g., 10-80) is released immediately or within two hours of administration, and
some of the more common causes of medication-induced hyponatremia are diuretics and selective serotonin
reuptake inhibitors (ssris)
then there's the time commitment; usually four hours per visit, three times a week, plus
travel; which, if you're employed, eats into work-time and may reduce your income.
30 mg prozac for ocd
